

Addenbrooke's Hospital

Cambridge, UK

Titan HPL,
Vepps HPL &
Solid Surface
Vanity Units

A full height, strong & stylish washroom package

The project.

Addenbrooke's Hospital delivers expert care for patients across Cambridge, with a designated academic health centre to stimulate transformative teaching and research.

Ranking in the top five best hospitals in the UK, Addenbrooke's has been expanding year upon year to accommodate the scale of future growth and medical research.

The challenge.

Treating nearly 900,000 patients a year, the hospital required hardwearing cubicles and washroom systems that could withstand the high footfall and provide optimum privacy to ensure patients feel comfortable and secure.

We worked with Accredited Installers T-IPS to guarantee hardwearing washroom systems that surpassed hygiene levels and could stand the test of time in this busy hospital.

The solution.

Our full height, strong and stylish Titan toilet cubicles provided rigid aluminium wall channels, headrails, and pilasters set into a unique aluminium shoe for a stable cubicle solution that will withstand heavy usage.

Titan cubicles feature a 10mm ceiling and 5mm floor clearance for maximum user privacy. Further safety and security concerns are met with our anti-finger trap hinges and emergency release indicator bolts which come as standard with the Titan range, preventing injuries and allowing locked cubicles to be accessed safely and rapidly.

Our industry-leading, pre-plumbed Vepps IPS panelling was specified for the washrooms, providing an ultra-strong aluminium frame and simple click-fix assembly.

Allowing a 50% faster install time compared to plain panel alternatives, the busy hospital could readily open the new washroom facilities and begin catering to patients' needs. Vepps panels are compatible with all our products, allowing the hospital to also specify industry-leading sector specific sanitaryware, including concealed urinals and urinal divisions for enhanced privacy.

Complementing Solid Surface vanity units were the perfect choice for this project, as the high impact and non-porous material is fantastic in hygiene-critical areas. These sleek vanity units specified with 'Everest' tops provided a contemporary and seamless appearance to match the calming wood effect throughout the washrooms.

Titan, Vepps and the vanity unit underframes and panels were specified in matching 'Soft Oak' High Pressure Laminate (HPL). The durable HPL material boasts scratch and impact-resistant qualities, as well as being easy to clean thanks to its smooth surface, ensuring required hygiene levels can be kept high.

We were thrilled to provide a full washroom package solution to such a highly regarded healthcare facility, allowing efficient day-to-day usage for patients and staff.
